Estimator: deterministic LightGBM OmniFold (5 iterations, 100 trees, 8 leaves)
with purity-based background subtraction; statistical intervals corrected
for the nominal-truth bias; 400 pseudo-experiments per truth.
Solid lines: nominal 0.68 / 0.95. Dashed: predeclared gate 0.66 / 0.94.
Bars: one-sided Clopper–Pearson bounds, each at $\alpha = 0.05/459$.
